

**MEMORANDUM**

August 30, 2000

**SUBJECT:** Revision to Memorandum dated August 29, 2000 regarding "Respirators to be worn when on mine site and performing perimeter air monitoring at Export Plant"

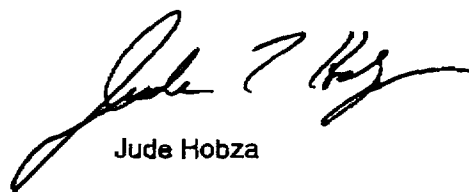

**FROM:** Jude Hobza

**TO:** Jim Stout

The perimeter air monitoring samples collected for the Export Plant as per the work plans shall be analyzed by Phase Contrast Microscopy (PCM) NIOSH Method 7400. The sample with the highest PCM result for the day shall be analyzed using Transmission Electron Microscopy (TEM), recording all information as specified in the ISO 10312 method, as directed by Paul Peronard.

Perimeter air monitoring of the planer building shall continue as outlined in the previous memorandum.

cc: Paul Peronard, On-Scene Coordinator; 8EPR-ER  
Duc Nguyen, On-Scene Coordinator; 8EPR-ER  
Chris Weis, 8EPR-PS
